SUBJECT INDEX

(AVD): design trade-offs, aerospace vehicle detection, 58
Ac-coupled infrared images, digital restoration of, 161
Actual infrared mosaic background measurements, balloon altitude mosaic measurements (BAMM) data report on, 156
Advanced focal plane arrays, computer-aided facility for mosaic sensor test and calibration and characterization of, 115
Aerospace vehicle detection (AVD): design trade-offs, 58
Alarm, infrared forest fire, 237
Altitude mosaic measurements (BAMM) data report on actual infrared mosaic backgound measurements, balloon, 156
Analysers for continuous measurement of the concentration of carbon monoxide in a moist and dusty atmosphere, use of infrared, 281
Analysis—are we sure we know what we are measuring?, near-infrared diffuse reflectance, 256
Application of image evaluation technology to heat loss diagnostic sensors, 108
Applications in combustion technology, some infrared (IR), 270
Array, pulse-bias modulation of a PbS mosaic, 9
Arrays, computer-aided facility for mosaic sensor test and calibration and characterization of advanced focal plane, 115
Artillery-produced dust clouds on infrared electro-optical systems, obscuration effects of, 195
Assembly, digital and optical methods of image differencing for track, 80
Astronomical sources in the second Equatorial Infrared Catalogue, distribution of, 217
Atmosphere, use of infrared analysers for continuous measurement of the concentration of carbon monoxide in a moist and dusty, 281
Axis for a flapping mirror in thermal imaging scanners, optimum rotation, 129

(BAMM) data report on actual infrared mosaic background measurements, balloon altitude mosaic measurements, 156
Background due to spacecraft-induced line-of-sight jitter, statistical modeling of infrared (IR), 30
Background measurements, ballon altitude mosaic measurements (BAMM) data report on actual infrared mosaic, 156
Background suppression and tracking with a staring mosaic sensor, 19
Backgrounds from space, vacuum ultraviolet, 148
Balloon alititude mosaic measurements (BAMM) data report on actual infrared mosaic background measurements, 156
Band, refracting infrared objectives for the 8-13 micron, 90
Barrier monolithic IRCCD focal plane, TV-compatible Schottky, 134

Calibration and characterization of advanced focal plane arrays, computer-aided facility for mosaic sensor test and, 115
Carbon monoxide in a moist and dustry atmosphere, use of infrared analysers for continuous measurement of the concentration of, 281
Catalogue, distribution of astronomical sources in the second Equatorial Infrared, 217
Characterization of advanced focal plane arrays, computer-aided facility for mosaic sensor test and calibration and, 115
Classification system, infrared source, 241
Clouds on infrared electro-optical systems, obscuration effects of artillery-produced dust, 195
Clutter rejection in a quasi-staring sensor, signal processing for, 48
Combustion technology, some infrared (IR) applications in, 270
Compensation for step-stare systems by focal plane and optics manipulation, image motion, 41
Components in infrared instrumentation: an industrial view of current infrared technology, sources and optical, 248
Computer-aided facility for mosaic sensor test and calibration and characterization of advanced focal plane arrays, 115
Concentration of carbon monoxide in a moist and dusty atmosphere, use of infrared analysers for continuous measurement of the, 281
Conductivity measurements by means of radiation thermometry, thermal, 305
Control systems for paper machines, moisture control using new, 265
Control using new control systems for paper machines, moisture, 265
Cooler approach, cryogenic cooling of instruments in orbit—a standard solid cryogen, 99
Cooling of instruments in orbit—a standard solid cryogen cooler approach, cryogenic, 99
Cryogen cooler approach, cryogenic cooling of instruments in orbit—a standard solid, 99
Cryogenic cooling of instruments in orbit—a standard solid cryogen cooler approach, 99

Data report on actual infrared mosaic background measurements, balloon altitude mosiac measurements (BAMM), 156
Data, statistical scene study of Skylab infrared, 225
Deposition of optical thin films for infrared use, plasma, 319
Design engineering, new developments in the use of thermal measurement techniques for structural, 324
Design and test of the near infrared mapping spectrometer (NIMS) focal plane for the Galileo Jupiter Orbiter Mission, 210
Detection (AVD): design trade-offs, aerospace vehicle, 58
Detector, liquid phase epitaxial PbSnTe and the performance of the, 94
Detectors, industrial limitations of infrared, 287
Development of a staring mosaic module, 2
Developments in the use of thermal measurement technique for structural design engineering, new, 324
Diagnostic sensors, application of image evaluation technology to heat loss, 108
Differencing for track assembly, digital and optical methods of image, 80
Diffuse reflectance analysis-are we sure we know what we are measuring?, near-infrared, 256
Digital and optical methods of image differencing for track assembly, 80
Digital restoration of ac-coupled infrared images, 161
Distribution of astronomical sources in the second Equatorial Infrared Catalogue, 217
Dust clouds on infrared electro-optical systems, obscuration effects of artillery-produced, 195
Dusty atmosphere, use of infrared analysers for continuous measurement of the concentration of carbon monoxide in a moist and, 281
Dynamics as viewed by a satellite-borne mosaic sensor, earth scene, 35

Earth scene dynamics as viewed by a satellite-borne mosaic sensor, 35
Effects of artillery-produced dust clouds on infrared electro-optical systems, obscuration, 195
8-13 micron band, refracting infrared objectives for the, 90
Electro-optical systems, obscuration effects of artillery-produced dust clouds on infrared, 195
Engineering, new developments in the use of thermal measurement techniques for structural design, 324
Epitaxial PbSnTe and the performance of the detector, liquid phase, 94
Equatorial Infrared Catalogue, distribution of astronomical sources in the second, 217
Evaluation technology to heat loss diagnostic sensors, application of image, 108
Extended spectral range field measurement spectrometer, high-resolution, 191

Facility for mosaic sensor test and calibration and characterization of advanced focal plane arrays, computer-aided, 115
Fiber optics in industrial infrared thermometry, use of, 295
Field measurement spectrometer, high-resolution, extended spectral range, 191
Figures of merit for infrared sensors, 64
Films for infrared use, plasma deposition of optical thin, 319
Fire alarm, infrared forest, 237
Flapping mirror in thermal imaging scanners, optimum rotation axis for a, 129
Focal plane arrays, computer-aided facility for mosaic sensor test and calibration and characterization of advanced, 115
Focal plane for the Galileo Jupiter Orbiter Mission, design and test of the near infrared mapping spectrometer (NIMS), 210
Focal plane and optics manipulation, image motion compensation for step-stare systems by, 41
Focal plane, TV-compatible Schottky barrier monolithic IRCCD, 134
Forest fire alarm, infrared, 237
400 MHz traveling wave modulator, 233

Galileo Jupiter Orbiter Mission, design and test of the near infrared mapping spectrometer (NIMS) focal plane for the, 210

Heat loss diagnostic sensors, application of image evaluation technology to, 108
High-resolution, extended spectral range field measurement spectrometer, 191

(IR) applications in combustion technology, some infrared, 270
(IR) background due to spacecraft-induced line-of-sight jitter, statistical modeling of infrared, 30
IRCCD focal plane, TV-compatible Schottky barrier monolithic, 134
Image differencing for track assembly, digital and optical methods of, 80
Image evaluation technology to heat loss diagnostic sensors, application of, 108
Image motion compensation for step-stare systems by focal plane and optics manipulation, 41
Images, digital restoration of ac-coupled infrared, 161
Imaging scanners, optimum rotation axis for a flapping mirror in thermal, 129
Industrial infrared thermometry, use of fiber optics in, 295
Industrial limitations of infrared detectors, 287
Industrial view of current infrared technology, sources and optical components in infrared instrumentation: an, 248
Infrared analysers for continuous measurement of the concentration of carbon monoxide in a moist and dusty environment, use of, 281
Infrared Catalogue, distribution of astronomical sources in the second Equatorial, 217
Infrared data, statistical scene study of Skylab, 225
Infrared detectors, industrial limitations of, 287
Infrared diffuse reflectance analysis—are we sure we know what we are measuring?, near-, 256
Infrared electro-optical systems, obscuration effects of artillery-produced dust clouds on, 195
Infrared forest fire alarm, 237
Infrared (IR) applications in combustion technology, some, 270
Infrared (IR) background due to spacecraft-induced line-of-sight jitter, statistical modeling of, 30
Infrared images, digital restoration of ac-coupled, 161
Infrared instrumentation: an industrial view of current infrared technology, sources and optical components in, 248
Infrared laser velocimetry, 325
Infrared lasers, solid state tunable, 311
Infrared mosaic background measurements, balloon altitude mosaic measurements (BAMM) data report on actual, 156
Infrared objectives for the 8-13 micron band, refracting, 90
Infrared sensors, figures of merit for, 64
Infrared source classification system, 241
Infrared technology, sources and optical components in infrared instrumentation: an industrial view of current, 248
Infrared thermometry, use of fiber optics in industrial, 295
Infrared use, plasma deposition of optical thin films for, 319
Instrumentation: an industrial view of current infrared technology, sources and optical components in infrared, 248
Instruments in orbit—a standard solid cryogen cooler approach, cryogenic cooling of, 99

Jitter, statistical modeling of infrared (IR) background due to spacecraft-induced line-of-sight, 30

Laser velocimetry, infrared, 325
Lasers, solid state tunable infrared, 311
Limitations of infrared detectors, industrial, 287
Line-of-sight jitter, statistical modeling of infrared (IR) background due to spacecraft-induced, 30
Liquid phase epitaxial PbSnTe and the performance of the detector, 94

Machines, moisture control using new control systems for paper, 265
Manipulation, image motion compensation for step-stare systems by focal plane and optics, 41
Mapping spectrometer (NIMS) focal plane for the Galileo Jupiter Orbiter Mission, design and test of the near infrared, 210
Measurement of the concentration of carbon monoxide in a moist and dusty atmosphere, use of infrared analysers for continuous, 281
Measurement spectrometer, high-resolution, extended spectral range field, 191
Measurement techniques for structural design engineering, new developments in the use of thermal, 324
Measurements (BAMM) data report on actual infrared mosaic background measurements, balloon alititude mosaic, 156
Measurements, balloon altitude mosaic measurements (BAMM) data report on actual infrared mosiac background, 156
Measurements by means of radiation thermometry, thermal conductivity, 305
Measuring?, near-infrared diffuse reflectance analysis—are we sure we know what we are, 256
Micron band, refracting infrared objectives for the 8-13, 90
Military systems applications at near-millimeter wavelengths, 170
Mirror in thermal imaging scanners, optimum rotation axis for a flapping, 129
Modeling of infrared (IR) background due to spacecraft-induced line-of-sight jitter, statistical, 30
Modulation of a PbS mosaic array, pulse-bias, 9
Modulator, 400 MHz traveling wave, 233
Module, development of a staring mosaic, 2
Moist and dusty atmosphere, use of infrared analysers for continuous measurement of the concentration of carbon monoxide in a, 281
Moisture control using new control systems for paper machines, 265
Monolithic IRCCD focal plane, TV-compatible Schottky barrier, 134

Monoxide in a moist and dusty atmosphere, use of infrared analysers for continuous measurement of the concentration of carbon, 281
Mosaic array, pulse-bias modulation of a PbS, 9
Mosaic background measurements, balloon altitude mosaic measurements (BAMM) data report on actual infrared, 156
Mosaic measurements (BAMM) data report on actual infrared mosaic background measurements, balloon altitude, 156
Mosaic module, development of a staring, 2
Mosaic sensor, background suppression and tracking with a staring, 19
Mosaic sensor, earth scene dynamics as viewed by a satellite-borne, 35
Mosaic sensor test and calibration and characterization of advanced focal plane arrays, computer-aided facility for, 115
Motion compensation for step-stare systems by focal plane and optics manipulation, image, 41

(NIMS) focal plane for the Galileo Jupiter Orbiter Mission, design and test of the near infrared mapping spectrometer, 210
Near-infrared diffuse reflectance analysis—are we sure we know what we are measuring?, 256
Near infrared mapping spectrometer (NIMS) focal plane for the Galileo Jupiter Orbiter Mission, design and test of the, 210
Near-millimeter wavelengths, military systems applications at, 170
New developments in the use of thermal measurement techniques for structural design engineering, 324

Objectives for the 8-13 micron band, refracting infrared, 90
Obscuration effects of artillery-produced dust clouds on infrared electro-optical systems, 195
Optical components in infrared instrumentation: an industrial view of current infrared technology, sources and, 248
Optical methods of image differencing for track assembly, digital and, 80
Optical thin films for infrared use, plasma deposition of, 319
Optics in industrial infrared thermometry, use of fiber, 295
Optics manipulation, image motion compensation for step-stare systems by focal plane and, 41
Optimum rotation axis for a flapping mirror in thermal imaging scanners, 129
Orbit—a standard solid cryogen cooler approach, cryogenic cooling of instruments in, 99

PbS mosaic array, pulse-bias modulation of a, 9
PbSnTe and the performance of the detector, liquid phase epitaxial, 94
Paper machines, moisture control using new control systems for, 265
Performance of the detector, liquid phase epitaxial PbSnTe and the, 94
Phase epitaxial PbSnTe and the performance of the detector, liquid, 94
Plane arrays, computer-aided facility for mosaic sensor test and calibration and characterization of advanced focal, 115
Plane, TV-compatible Schottky barrier monolithic IRCCD focal, 134
Plasma deposition of optical thin films for infrared use, 319
Processing for clutter rejection in a quasi-staring sensor, signal, 48
Pulse-bias modulation of a PbS mosaic array, 9

Quasi-staring sensor, signal processing for clutter rejection in a, 48

Radiation thermometry, thermal conductivity measurements by means of, 305
Range field measurement spectrometer, high-resolution, extended spectral, 191
Reflectance analysis—are we sure we know what we are measuring?, near-infrared diffuse, 256
Refracting infrared objectives for the 8-13 micron band, 90
Rejection in a quasi-staring sensor, signal processing for clutter, 48
Resolution, extended spectral range field measurement spectrometer, high-, 191
Restoration of ac-coupled infrared images, digital, 161
Rotation axis for a flapping mirror in thermal imaging scanners, optimum, 129

Satellite-borne mosaic sensor, earth scene dynamics as viewed by a, 35
Scanners, optimum rotation axis for a flapping mirror in thermal imaging, 129
Scene dynamics as viewed by a satellite-borne mosaic sensor, earth, 35
Scene study of Skylab infrared data, statistical, 225
Schottky barrier monolithic IRCCD focal plane, TV-compatible, 134
Second Equatorial Infrared Catalogue, distribution of astronomical sources in the, 217
Sensor, background suppression and tracking with a staring mosaic, 19
Sensor, earth scene dynamics as viewed by a satellite-borne mosaic, 35
Sensor, signal processing for clutter rejection in a quasi-staring, 48
Sensor test and calibration and characterization of advanced focal plane arrays, computer-aided facility for mosaic, 115
Sensors, applications of image evaluation technology to heat loss diagnostic, 108
Sensors, figures of merit for infrared, 64
Signal processing for clutter rejection in a quasi-staring sensor, 48
Skylab, infrared data, statistical scene study of, 225
Solid cryogen cooler approach, cryogenic cooling of instruments in orbit—a standard, 99
Solid state tunable infrared lasers, 311
Some infrared (IR) applications in combustion technology, 270
Source classification system, infrared, 241
Sources and optical components in infrared instrumentation: an instrial view of current infrared technology, 248
Sources in the second Equatorial Infrared Catalogue, distribution of astronomical, 217
Space, vacuum ultraviolet backgrounds from, 148
Spacecraft-induced line-of-sight jitter, statistical modeling of infrared (IR) background due to, 30
Spectral range field measurement spectrometer, high-resolution, extended, 191
Spectrometer, high-resolution, extended spectral range field measurement, 191
Spectrometer (NIMS) focal plane for the Galileo Jupiter Orbiter Mission, design and test of the near infrared mapping, 210
Standard solid cryogen cooler approach, cryogenic cooling of instruments in orbit—a, 99
Staring mosaic module, development of a, 2
Staring mosaic sensor, background suppression and tracking with a, 19
State tunable infrared lasers, solid, 311
Statistical modeling of infrared (IR) background due to spacecraft-induced line-of-sight jitter, 30
Statistical scene study of Skylab infrared data, 225
Step-stare systems by focal plane and optics manipulation, image motion compensation for, 41
Structural design engineering, new developments in the use of thermal measurement techniques for, 324
Study of Skylab infrared data, statistical scene, 225
Suppression and tracking with a staring mosaic sensor, background, 19
System, infrared source classification, 241
Systems applications at near-millimeter wavelengths, military, 170
Systems for paper machines, moisture control using new control, 265

TV-compatible Schottky barrier monolithic IRCCD focal plane, 134
Techniques for structural design engineering, new developments in the use of thermal measurement, 324
Technology, some infrared (IR) applications in combustion, 270
Technology, sources and optical components in infrared instrumentation: an industrial view of current infrared, 248

Test and calibration and characterization of advanced focal plane arrays, computer-aided facility for mosaic sensor, 115
Test of the near infrared mapping spectrometer (NIMS) focal plane for the Galileo Jupiter Orbiter Mission, design and, 210
Thermal conductivity measurements by means of radiation thermometry, 305
Thermal imaging scanners, optimum rotation axis for a flapping mirror in, 129
Thermal measurement techniques for structural design engineering, new developments in the use of, 324
Thermometry, thermal conductivity measurements by means of radiation, 305
Thermometry, use of fiber optics in industrial infrared, 295
Thin films for infrared use, plasma deposition of optical, 319
Track assembly, digital and optical methods of image differencing for, 80
Tracking with a staring mosaic sensor, background suppression and, 19
Traveling wave modulator, 400 MHz, 233
Tunable infrared lasers, solid state, 311

Ultraviolet backgrounds from space, vacuum, 148
Use of fiber optics in industrial infrared thermometry, 295
Use of infrared analysers for continuous measurement of the concentration of carbon monoxide in a moist and dusty atmosphere, 281

Vacuum ultraviolet backgrounds from space, 148
Vehicle detection (AVD): design trade-offs, aerospace, 58
Velocimetry, infrared laser, 325

Wave modulator, 400 MHz traveling, 233
Wavelengths, military systems applications at near-millimeter, 170
